Current Environment

Documents prepared using MS Word and then converted to PDF file

Problem Areas

- ▶ Intended user needs to download the documentation to their device
- ▶ User needs to scan through a lot of information to find the relevant option/feature using **Table of Contents (ToC)** or the **Search** functionality
- ▶ Online help feature unavailable, resulting in loss of continuity and understanding for user
- ▶ Additionally, user needs to switch between the application and the documentation while trying to replicate what is being documented.

Proposed Solution

Use of a **Single Source Layout (SSL)** tool to create documentation that can be accessed directly from the application

Benefits

- ▶ Adherence to industry-standard practices of structured authoring
- ▶ Creating Context-sensitive online help
- ▶ Clarity of content for end user using Topic-based authoring
- ▶ Improved Customer Satisfaction
- ▶ Integration with CMS Tools like ServiceNow
- ▶ Publish content in different formats: HTML 5 Help, Web Help, PDF, Word, XML, etc.
- ▶ Multi-Channel Publishing
- ▶ Multi-Language Publishing using translation tools

Benefits Contd...

- ▶ Single Source Layout Publishing
- ▶ Supports documents created in different formats
- ▶ Improved quality of documentation
- ▶ Content reusability
- ▶ Style Inspector to view and edit CSS properties of the content
- ▶ Ability to find and fix issues related to content before publishing
- ▶ Select content creation mode:
WYSIWYG editor / HTML or XML code

Implementation

- ▶ Create/update content using the SSL Tool
- ▶ Publish it in required format. For example, HTML 5 Help, PDF, Excel, PPT
- ▶ Update content to ServiceNow
- ▶ Upload content for Online Help to application by sharing the output format with development team
- ▶ When the user will click on the **Help** icon or the **F1** button on their keypad, relevant content will appear.
